- Insert the part with the pre-assembled spindle in the hole (1).

N.B. This part must be fixed on the external side of the door.

- Insert the knob into the hole, centering it on the spindle inserted just before (2).

- Insert the screw in the central hole on the external side and screw it in until the knob is firmly fixed (3).

N.B. : Depending on the thickness of the door, it may be necessary to shorten the screw.

- Check that the assembly is stable and that both parts can rotate freely (4.1 - 4.2).
